Preface	1
Report Summary	2
1. Felony Sentencing in Missouri 1986-2014	6
2. Circuit and County Rankings by Disposition	
a) Prison Sentences as Percent of All Sentences	11
b) Shock and Treatment as Percent of Prison, Shock and Treatment Sentences	13
c) Average Prison Sentences	15
d) Nonviolent Offenders as Percent of Incarcerated Offenders	17
e) Recidivism after Two Years by Prison Releases	19
f) Recidivism after Two Years of Probationers (Revocation Rates)	21
3. Incarceration and Felony Sentencing Rates by County	23
4. Sentencing Disparity by Geographic Area	27
5. Sentencing Disparity by Race and Ethnicity	31
6. Disparity in the Application of the Death Penalty	45
7. Recidivism and Sentencing Disposition	50
Appendix	
1. Felony Sentences – Percent Disposition and Average Sentence From Fiscal 2007 to Fiscal 2014	61
2. Authorizing Statute Section 558.019, RSMo	70

PREFACE

The Missouri Sentencing Advisory Commission is pleased to provide an annual report on sentencing and sentencing disparity in Missouri. The report is in fulfillment of the Commission's statutory responsibility to study sentencing practices and to report on the extent of disparity in sentencing disposition or length of sentences around the state and by race or ethnicity.

The report provides statistics on sentencing, the application of the death penalty and recidivism rates related to alternative sentences and prior criminal history.

The report has been produced with the assistance of professional staff in the Department of Corrections and in the Office of the State Courts Administrator.

Suggestions for topics to be included in future reports are welcome.

REPORT SUMMARY

Factors Determining Missouri's Incarceration Rate

At first glance, the best predictor of prison population would appear to be the number of offenders being sentenced and sent to prison at their first sentencing. However, the percentage growth in the prison population has been greater than the percentage growth of offenders being sentenced to prison at their first sentencing. The best predictor of changes in the prison population is the number of offenders being sentenced for a felony offense, regardless of disposition. This is due to the revocation effect. If the total number of offenders sentenced to probation at first sentencing increases then the number of probationers who are later revoked increases. If the number of offenders sentenced to Chapters 559 and 217 programs increases then the number of probationers who are later revoked will also increase.

In fact, the revocation rate of offenders released from a 559 program is higher than that of offenders who are sentenced to straight probation. This makes sense because straight probation is, arguably, a lesser punishment than a 559 program and offenders sentenced to a 559 program generally have an increased criminal history. Prior criminal history not only influences sentencing but is also a risk measure. Simply stated, 559 participants represent a riskier group than those defendants sentenced to straight probation.

Of course, there are other factors that impact upon the prison population such as parole board release practices, minimum prison terms, no parole sentences, longer sentences for sex offenders and the ever-growing list of dangerous felons (those required to serve 85% before parole consideration).

1. Felony Sentencing in Missouri

In FY14 (July 1, 2013 to June 30, 2014), the number of felony sentences (first, final dispositions including SIS, SES, 559, 217 or unmitigated sentences to prison) increased by 0.7%, from 27,435 in FY13 to 27,627. In 65.8% of the sentences, probation was granted. The increase of 0.7% in FY14 is small compared to the increases of nearly 5% in FY12 and FY13 but it is in line with the slowing in new sentencing that has been occurring over the last 15 years. In the 1990s the average annual increase in sentencing was 5.5% and in the first decade of the 21st century the average annual increase was 1.5%. This slowing in sentencing in the last decade is the major reason why the growth in the prison population has slowed. Nevertheless, in the last decade, the prison population has increased by the near equivalent of a new prison, 1,686 inmates (see *Felony Sentencing in Missouri*, page 6).

2. Circuit and County Rankings

Great variations exist in how counties sentence. One of the most striking disparities is in the percentage of defendants, who, at first, final disposition are sentenced to unmitigated prison commitments - no SIS, no SES, no 559, no 217 etcetera. In FY14, while the state average for unmitigated prison commitments was 24.3%, two circuits sentenced over 40% of their defendants to prison, while eight circuits sentenced less than 20% of their defendants to prison. Even when comparing metropolitan areas, significant differences exist: St. Louis City sentenced 26% of their defendants to prison compared to 21% by St. Louis County and 20% by

Jackson County. The counties that use the 559 programs the most are generally the counties with a low percentage of unmitigated prison commitments. What is surprising is that the counties that have the most violent and serious crime, St. Louis and Jackson County, are not the counties that have the highest prison sentencing (see page 10). Counties and circuit courts are ranked on six sentencing and recidivism measures.

3. Incarceration and Felony Sentencing Rates

The incarceration rate for FY14 for a given county is the number of offenders in prison from that county on June 30, 2014 divided by the population of the sentencing county on June 30, 2014. The incarceration rate allows comparisons in sentencing between counties with small populations and counties with large populations (see chart Recidivism Rates, page 22).

Ranking 1st is St. Louis City with a population in excess of 300,000. On June 30, 2014, it had the highest incarceration rate in the state. Ranking 2nd and 3rd were Dunklin and Livingston Counties, respectively, with a population 1/7th the size of St Louis City. It would appear that St. Louis City's rate is primarily due to the large number of serious crimes it experiences - resulting in more and longer prison sentences; Dunklin and Livingston incarceration rates are likely due to the sheer amount of crime per population that they experience. Interestingly, in terms of the amount of crime (violent and nonviolent), St. Louis City is only ranked 10th in the state (see chart Felony Sentencing Rates, page 24).

4. Geographic Sentencing Disparity

Geographic sentencing disparity is the difference in sentencing around the state for specific offenses. The data show that rural counties sentence more severely offenders with convictions for drugs, DWI and other nonviolent offenses than the metropolitan circuits. For example, rural counties sentence 20% of drug offenders to prison while the metropolitan counties send only 12% of offenders to prison. The sentencing of serious violent and sex offenses is closer but rural counties still sentence more severely. For class A felony violent offenses (murder, robbery, assault and kidnapping), 84% of offenders are sentenced to prison by the metropolitan counties and the average sentence is 17 years, while 75% of offenders are sentenced to prison in rural counties and the average sentence is 21 years (see chart New Sentencing, page 29).

5. Sentencing Disparity by Race

Endeavoring to fairly analyze whether race forms the basis of a sentencing disparity requires an examination of the severity of the offense, prior criminal history and time served.

Notwithstanding the need for this analytical approach, the frank numbers are that the Missouri incarceration rate for blacks (based upon 100,000 population increments) is 4.4 times that of whites. Nationally, the rate is 5.7 times that of whites.

FY14 sentencing data shows that for the four racial or ethnic groups: black, hispanic, white and other (Native American, Asian and Pacific Islander), blacks receive the highest average prison sentences (blacks, 7.5 years; hispanics, 6.1 years; whites, 5.6 years and other, 5.4 years). Further, when compared to whites, blacks have a higher rate of unmitigated prison sentences (black 27.8%; hispanic 27%; white 23.5% and other 20.5%; see chart New Sentencing, page 31).

An analysis by offense group (violent, nonviolent, DWI, drugs and sex) indicates that blacks are more likely to be sentenced to prison and/or have a longer sentence than whites for class A and B drug offenses and class C violent felonies (see charts, pages 33 and 34). For the remaining offenses (DWI, nonviolent, sex and child abuse and violent class A and B felonies), there are no significant differences between the races.

Prior criminal history could be a reason for sentencing disparities between the races because prior criminal history results, arguably, in more severe sentencing. In recent years there is little difference between the levels of prior criminal history of white and black males but over the last decade black males have had on average more priors. White females have a higher level of criminal history than black females.

Another source of the disparity may lie with the release practices of the Missouri Board of Probation and Parole. For offenders sentenced to a prison sentence, the Board of Probation and Parole has the discretionary responsibility to determine the release dates, subject to statutory restrictions on minimum prison time (Section 558.019, RSMo) and the statute that defines conditional release (Section 558.011, RSMo).

In FY14, the DOC released 7,531 offenders to their first release in their commitment. The average time served was 32.3 months and that comprised 40.5% of the aggregate sentence. Blacks served significantly more time than whites (43 months compared to 28 months), in part, because blacks were sentenced to longer sentences (82 months for blacks compared to 65 months for whites (see chart on page 36). As a percent of sentence, blacks also served longer than whites (53% for blacks compared to 43% for whites), but the difference between the actual time served and the Parole Board guideline time was similar for all races. The guideline time served is based upon a race neutral risk assessment, using risk factors that have been related to recidivism (see chart Sentence Served, page 38).

In order to more analytically evaluate the differences in sentencing between the races a statistical model was developed that included the offense, the felony class, prior criminal history, race, gender, age and the circuit court of sentencing (Section 4(vi)). The analysis ranked the variables in the amount that they explained the sentence. The top three variables that explained most of the variation in sentencing were: the offense, the felony class and the prior criminal history. When the geographic diversity was represented by the three levels of metropolitan, first class and rural counties, race was included in the model. However, when the circuit court was included in the model, race became non-significant and was not selected.

The conclusion of the analysis is that race does not appear to significantly influence either sentencing or prison time served. This conclusion, of course, begs the questions: Are blacks a targeted population with more arrests, convictions, and, in turn, criminal histories? Are blacks charged with the same evenhandedness as other populations, or are they consistently charged with a more serious available charge? The analysis also indicated that the great variations in how courts sentence remain even after accounting for the major sentencing variables.

6. Disparity in the Application of the Death Penalty

The number of offenders being sentenced to the death penalty has been declining for over a decade, as have the number of offenders being sentenced to Murder 1st degree and Murder 2nd degree. Although there is a great disparity in the number of blacks being convicted of murder compared to all other races there is a lesser percent being sentenced to capital punishment than other races, either statewide or by county (see chart Murder 1st and Death Penalty, page 49).

7. Recidivism and Sentencing Disposition

According to the data collected by the DOC, defendants with a Level I criminal history (no prior felonies and no more than 3 misdemeanors) who are placed on probation are less likely to violate probation and be sent to prison within two years of being placed on probation than those same Level I defendants who are sentenced to an unmitigated prison sentence at their first final disposition and are released from prison (see chart Average Recidivism, page 52).

1. FELONY SENTENCING IN MISSOURI, FISCAL 1986-2014

From June 1986 to June 30, 2014 the prison population increased from 9,845 to 31,905, an increase of 329%. The main reason for that increase has been the increase in felony sentences. Since FY1986 felony sentences have increased by 295% and what is most surprising, given the increase in the prison population, is that the percent of felony convictions that are sentenced to probation has changed very little. In FY1986 63.5% of offenders received probation and in FY2014 65.8% of offenders received probation. What changed in the period was the growth of 120 day (Section 559.115, RSMo) and long term drug sentences (Section 217.262, RSMo) in the 1990s. The increase in shock probation and drug treatment has been an alternative to prison sentences. Since FY2000 the percent of prison sentences has been slowly increasing but in line with the slower increase in new sentences. In the last four years the average increase in felony sentences has been less than 1% per year but there is considerable variation from one year to the next. In FY12 and FY13 the increase in sentencing was nearly 5% per year while it declined by nearly 5% in FY10. Despite the slowing in the prison population, the increase in last decade has been 1,686, which is the equivalent of a new prison.

Annual Growth Rates of Felony Sentences

1986-1990	10.3%	
1990-2000	5.5%

FY2014	27,627	18,168	2,737	6,722	0.7%	65.8%	9.9%	24.3%	31,905	1.5%

The increase in sentencing in the 1990s was lead by drug offenses, which averaged an increase of least 10% per year up to 2000. There was a decline from FY05 to FY10 but since FY05 the number of drug sentences has again been increasing and has averaged 3% per year in the last

four years (particularly drug possession). The second fastest growing offense group is nonviolent (stealing, burglary, receiving) and in the last four years nonviolent offenses have increased by an average of 2% per year. Violent offenses had been increasing from FY2000 with the creation of new offenses for domestic violence and assault of a law enforcement officer, but the number of violent offenses has declined in the last four years by 1% a year.

Sentencing by Offense Group

Sentencing by Offense Group

	FY1986	FY1990	FY1995	FY2000	FY2005	FY2010	FY2014

Increases and Decreases in Sentencing for the Top 15 Offenses Fiscal 2000-2014

Murder 2nd degree	0.8%	
Rape/Sodomy/Statutory Rape/Sodomy 1st degree and Child Molestation	-6.7%	
Child Abuse/ Endangering the Welfare of a Child	-9.0%	
Robbery 1st degree	5.4%	
Robbery 2nd degree	14.4%	
Assault/Domestic Assault/ Assault LEO 1st	-4.5%	
Assault/Domestic Assault/ Assault LEO 2nd	107.2%	
Burglary 1st degree	48.1%	
Burglary 2nd degree	24.0%	
Stealing/Receiving	60.5%	
Forgery	-15.7%	
Drug Distribution	3.2%	
Drug Possession	48.2%	
DWI	9.7%	

Average Prison Sentences and Disposition

Average sentences for most offenses have changed very little since FY1986 but there have been new offenses, particularly for sex crimes and domestic assault. Many sex offenses have had the severity of sentencing increased, both of the average prison sentence and the percent who are sentenced to prison. For serious violent offenses (Murder 2nd, Robbery 1st and Assault 1st) there has been a small decline in the average sentence. For a number of nonviolent and drug offenses there has been a small increase in sentences but for most nonviolent and drug offenses about 70% of offenders are sentenced to probation. Over 60% offenders convicted of drug distribution, a class B felony, are sentenced to probation.

Source: Missouri Department of Corrections. Offenders received by the DOC for a new sentence (probation, shock probation, drug treatment or prison commitment). Multiple sentences handed down on the same day and in the same court are counted as one sentence and the offense is the most serious in offense severity and length of sentence.

2. CIRCUIT AND COUNTY RANKINGS BY DISPOSITION IN FISCAL 2014

When circuits are compared by sentence type and by average prison sentence at first, final disposition there are wide variations in sentencing practice. Using the sentence data for offenders received by the Department of Corrections for FY2014, the 45 Missouri circuit courts have been ranked using six measures:

1. Prison sentences (without the benefit of 559 and 217 programs) as a Percentage of All Sentences

The range is from 50.4% for circuit 43 (Caldwell, Clinton, Daviess, DeKalb and Livingston) down to 15.5% for circuit 29 (Jasper). The average percentage is 24.3%. St. Louis City (26.1%) is in the top one third and St. Louis County (20.4%) and Jackson County (21.0%) are in the lowest one third.

2. Shock and Treatment as a percentage of Prison, Shock and Treatment Sentences (559 and 217 programs)

The range is from 55.3% for circuit 10 (Marion, Monroe and Ralls) down to 15.1% for circuit 37 (Carter, Howell, Oregon and Shannon). The average percentage is 28.9%. Jackson County (33.9%) is in the second quartile and St. Louis City (16.2%) and St. Louis County (21.2%) are in the lowest one third.

3. Average Prison Sentences

St. Louis City has the highest average prison sentence (9.0 years) and Circuit 45 (Macon and Shelby) has the lowest average sentence (4.0 years). Life sentences are included in the average sentence as 30 years.

4. Average of Percent of Incarcerated Offenders with Nonviolent Offenses

The range is from 71.2% of the population for circuit 15 (Lafayette, Saline) to 16.9% for Jackson County. The counties with the lowest percentage of nonviolent offenders are the three metro counties (St Louis City, St. Louis County and Jackson County). The statewide average is 47.3%.

5. Recidivism After Two Years of Offenders Released to Parole or on Completion of the Sentence

The range of recidivism rates is from 47% in circuit 37 (Carter, Howell, Oregon, Shannon) to 28% in circuit 3 (Grunddy, Harrison, Mercer, Putnam). The range in recidivism is relatively narrow.

6. Recidivism After Two Years of Probation

Probation recidivism (revocations) has a much wider range from 38% in circuit 5 (Andrew and Buchanan) to 12% in Jackson. Nearly all the circuits with large populations have low probation recidivism rates.

Although these rankings indicate that sentencing standards appear very different between courts, small numbers may add to variability and there may be differences in the level of

crime, the type of crime and in the prior criminal history of the offender population. For example, St. Louis City has a higher percentage of violent crime than other circuits and that would explain the high average prison sentence in St. Louis City. The high volume of crime in St. Louis may explain the low proportion of sentences that result in a prison sentence.

Prison Sentences as a Percentage of all Dispositions in Fiscal 2014 by Circuit

This chart shows the number of defendants, who, at their first final disposition are sentenced and committed to prison without the benefit of 559 or 217 programs. Further, it does not include defendants who have had the imposition of their sentence suspended and are placed upon probation.

Ranked by percentage in descending order (highest percentage first).

Prison Sentences as a Percentage of all Dispositions in Fiscal 2014 by Sentencing County

This chart shows the number of defendants, who, at their first, final disposition are sentenced and committed to prison without the benefit of 559 or 217 programs. Further, it does not include defendants who have had the imposition of their sentence suspended and are placed upon probation.

Ranked by percentage in descending order (ranking of 1 is highest percentage).

Shock and Treatment Sentences by Circuit in Fiscal 2014

This chart shows the number of defendants who, at their first, final disposition were sentenced to a 559 or 217 program expressed as a percentage of all prison and 559 and 217 program.

Ranked by Percentage in Descending Order (highest percentage first).

The ranking indicates the use of 559 as an alternative to prison.

Shock and Treatment Sentences by Sentencing County in Fiscal 2014

This chart shows the number of defendants who, at their first final disposition were sentenced to a 559 or 217 program expressed as a percentage of all prison and 559 and 217 programs.

Ranked by percentage in descending order (ranking of 1 is highest percentage).

Average Prison Sentences in Fiscal 2014 by Circuit

This chart shows the average sentence of defendants, who, at their first, final disposition, were sentenced to a commitment, without the benefit of 559 and 217 programs. Life sentences are computed as 30 years.

Ranked by average prison sentence in descending order (longest sentence first).

Average Prison Sentences in Years in Fiscal 2014 by Sentencing County

This chart shows the average sentence of defendants, who, at their first, final disposition, were sentenced to a commitment, without the benefit of 559 and 217 programs. Life sentences are computed as 30 years.

Ranked by average prison sentence in descending order (ranking of 1 is longest sentence).

3. INCARCERATION AND FELONY SENTENCING RATES BY COUNTY

Missouri County Incarceration Rates for Fiscal 2014

Incarceration rates are calculated by dividing the number of offenders in prison who are sentenced by a county, divided by the population of the county. Rates are normally expressed per 100,000 of the population so that the incarceration rate can be presented as a three digit integer.

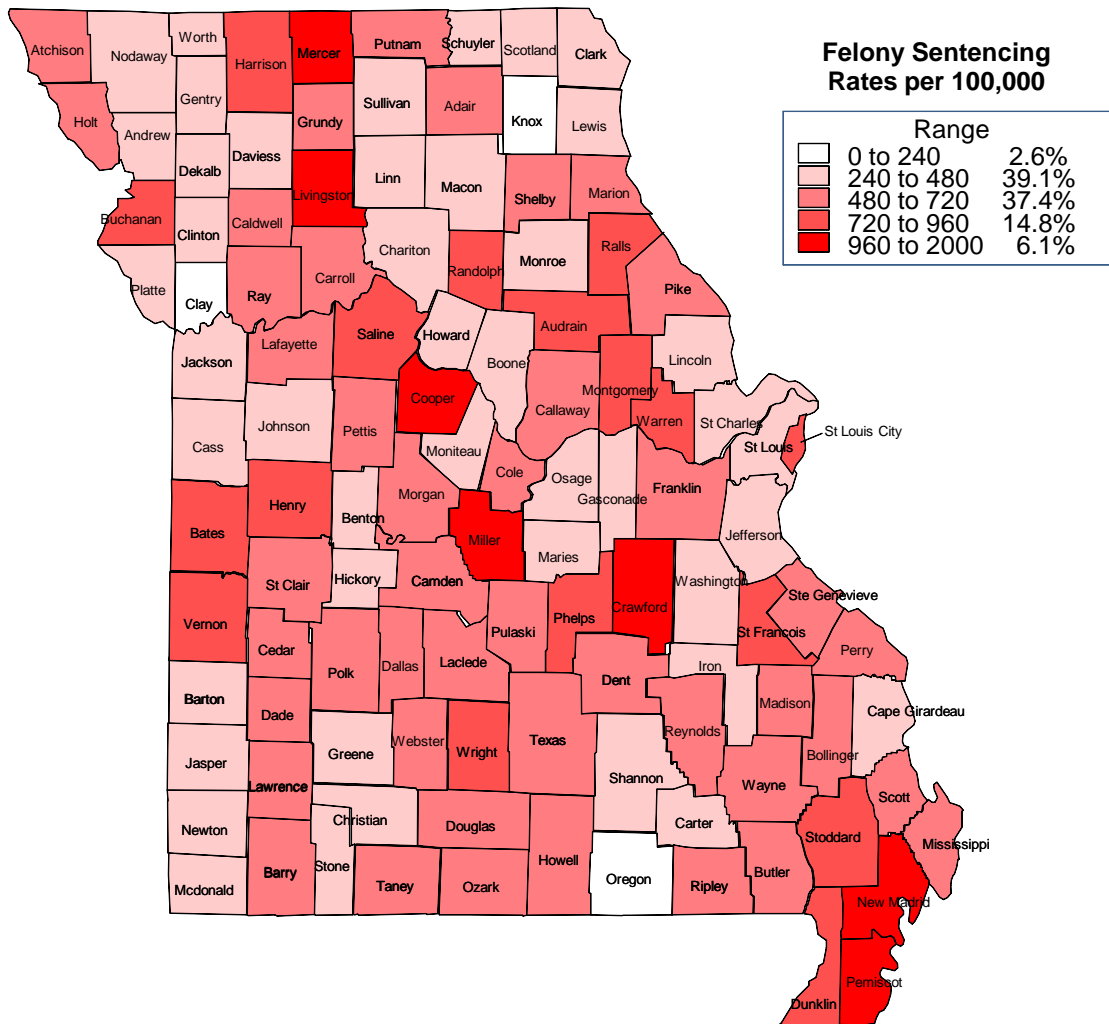

Incarceration Rate Per 100,000 Population by Sentencing County, June 30, 2014

County	Rank	Prison Population	Population Estimate	Incarceration Rate	County	Rank	Prison Population	Population Estimate	Incarceration Rate

Note: With each new issue of July 1 estimates, the census revise estimates for years back to the last census. Previously published estimates are superseded and archived. Offender populations exclude out of state offenders.

Missouri County Felony Sentencing Rates for Fiscal 2014

The sentencing rate is the number of felony sentences in FY2014 in the county, divided by the population of the county. The rate is normally expressed per 100,000 of the population so that the rate can be expressed as a three digit integer.

Incarceration and sentencing rates are similar measures that compare counties by excluding the effect of population size. The incarceration rate is used to measure the seriousness of crime because it is counting the number of offenders in prison, while the sentencing rate measures the total amount of crime, including offenders who receive a probation or a prison sentence.

Felony Sentencing Rate Per 100,000 Population by Sentencing County, FY2014

County	Rank	Felony Sentences	Population Estimate	Sentencing Rate	County	Rank	Felony Sentences	Population Estimate	Sentencing Rate

Note: With each new issue of July 1 estimates, the census revise estimates for years back to the last census. Previously published estimates are superseded. Offender populations exclude out of state offenders.

4. SENTENCING DISPARITY BY GEOGRAPHIC

When sentencing is grouped into three geographical areas based upon size of population (metropolitan, other first class counties and rural), comparisons indicate that the greatest differences are between the metropolitan areas and the rest of the state. The metropolitan areas have the longest prison sentences but the lowest percentage of prison sentences. Rural counties have higher percentages of probation, shock and treatment sentences than first class counties. Within the metro areas, Jackson County has the highest percentage of shock and treatment sentences and St. Louis City has both the highest number and percent of prison sentences.

New Sentencing and DOC Commitment, FY14 All Offenses

Circuits	Sentences	Percent Disposition			Average Sentence (years)
		Probation	Shock/ Treatment	Prison	
Jackson Cnty	1,834	68.0	10.9	21.2	7.1
St Louis Cnty	3,719	73.6	5.8	20.6	6.4
St. Louis City	2,658	68.8	4.8	26.4	8.9
Metro	8,211	70.8	6.6	22.6	7.5
First Class	9,125	63.2	10.3	26.5	5.8
Rural	10,286	63.3	12.1	24.6	5.5
Total	27,622	65.5	9.9	24.6	6.2

Metro: 16, 21, 22

First Class: 5, 6, 7, 11, 13, 17, 19, 20, 23, 26, 29, 31, 32

Rural: 1, 2, 3, 4, 8, 9, 10, 12, 14, 15, 18, 24, 25, 27, 28, 30, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45

The next three analyses by geographical area breakout the sentencing by offense group and then by felony class. The intent of the breakouts is to show that much of the apparent difference in sentencing is because of the type of crime and of the severity of the crime.

1. Offense Group

Comparing the three geographical areas for similar offenses (offense group) reduces the disparity in prison sentences and sentence disposition, particularly for violent and sex offenses. The first class counties and rural counties still, however, sentence more offenders to prison for drugs, DWI and nonviolent offense than the metro areas, although the average prison sentences are similar. St. Louis City has the highest prison disposition for all offense groups except DWI where it is nearly equal to St. Louis County. Highest average sentences within the metro group also tend to occur in St. Louis City for all but Sex and DWI offenses.

2. Offense Group and Felony Class for Violent and Sex Offenses

The most detailed breakout reduces the differences the most. For violent class A offenses the first class and rural counties have higher sentences but similar dispositions. For class B violent felonies the three geographical areas are similar in sentencing and for class C felonies the metro areas are more severe. For sex offenses the three geographical areas are also similar for class A and unclassified offenses. The rural and first class counties are more severe for class B sex offenses but similar for class C sex offenses.

5. SENTENCING DISPARITY BY RACE AND ETHNICITY

The most significant indicator of sentencing disparity by race is the incarceration rate in relation to the respective populations of blacks, Hispanics and whites. The Missouri incarceration rate for blacks is 4.4 times that of whites and nationally the black rate is 5.7 times the white incarceration rate. The incarceration rate for Hispanics in Missouri is lower than for whites and is only 40% of the national rate for hispanics. The intent of the following analysis is to explain the reasons for the disparity with available sentencing data.

Incarceration Rates by Race, 2013 Rate per 100,000 Population

	Missouri	US
Black	1,655	1,458
Hispanic	266	613
White	375	258
Total	521	417

Source: BJS Prisoners in 2013 (Table 8) and DOC offender statistics

There are many factors, including socio-economic, that play an important part in explaining the differences in incarceration rates between racial and ethnic groups. The analysis the Commission has conducted attempts to identify the relative impacts of severity of offense, prior criminal history and time served in Missouri.

Using the sentencing data for FY14, the comparison between the four racial or ethnic groups indicates that blacks have the highest average prison sentence, 7.5 years compared to an average of 5.6 years for whites, and blacks also have a higher percent of prison sentences than whites (27.8% compared to 23.5%). ‘Other’ includes Native Americans and Asian and Pacific Islanders.

New Sentencing and DOC Commitment in FY14 by Race All Offenses

Race/ Hispanic	Sentences	Percent Disposition				Average Prison Sentence (years)
		Probation	Shock/ Treatment	Prison	Percent of Sentence	
Black	7,362	65.4	6.9	27.8	100.0	7.5
Hispanic	440	65.0	8.0	27.0	100.0	6.1
White	19,602	65.5	11.1	23.5	100.0	5.6
Other	219	73.1	6.4	20.5	100.0	5.4
Total	27,623	65.5	9.9	24.6	100.0	6.2

A. Severity of Offense

The disparity in sentencing between races could be explained by differences in the types of offense committed by the different races. The analysis is by offense group and by offense and felony class for violent, sex and drug offenses. The offense group is an aggregation of offenses into five groups that have similar sentencing practices: violent, sex (and child abuse), drugs, DWI and nonviolent. The charge code definitions of the offense groups are included the MOSAC User Guide (Appendix D).

- For nonviolent offenses there are no clear differences: whites have a higher percent incarceration and blacks have a higher prison sentence.
- For DWI there is little difference.
- For violent offenses, blacks are more likely to be sentenced to prison than whites for class A, B and C felony offenses and they have the longest prison sentences for class B and C offenses.
- For drug offenses, blacks are more likely to be sentenced to prison than whites for class A and class B offenses and they have higher average prison sentences. Whites are more likely to be sent to prison for class C drug offense. This could indicate a racial bias where whites are more able to plea bargain a less serious offense.
- For sex and child abuse offenses there seem to be few differences.

B. Prior Criminal History

Prior criminal history could explain differences in sentencing between the races because prior criminal history results in more severe sentencing. For all sentencing in FY14 there is little difference in the prior criminal history of blacks and whites. For both blacks and whites, 39% are in level I (no prior felony convictions) and 25% in level II (one or two prior felonies). For the same level of prior criminal history, blacks have a longer sentence and a higher percentage sentenced to prison. For level I, the prison disposition percent of blacks is almost twice that of whites (12.1% to 6.5%).

Dispositions

Race/ Hispanic	Prior Criminal History Level *					Total
	Level I	Level II	Level III	Level IV	Level V	
Black	2,874	1,835	1,268	696	689	7,362

White	8.0	5.6	5.1	5.2	5.2	5.6
Other	5.1	4.9	5.6	5.3	6.3	5.4
Total	8.9	6.0	5.7	5.6	5.5	6.2

Prison sentences as a percent of all dispositions, FY14 sentencing

Race/ Hispanic	Prior Criminal History Level *				
	Level I	Level II	Level III	Level IV	Level V
Black	12.1%	27.7%	42.4%	43.0%	50.9%
Hispanic	15.8%	29.2%	44.4%	55.6%	39.1%
White	6.5%	21.6%	39.9%	44.5%	51.7%
Other	8.3%	22.0%	26.3%	66.7%	64.3%
Total	8.2%	23.3%	40.6%	44.3%	51.4%

** Prior Criminal History Levels:*

Level I - No felonies and no more than three misdemeanors.

Level II - One or two unrelated felonies or more than three misdemeanors.

Level III - Three unrelated felonies or one incarceration of 30 days or more.

Level IV - Four unrelated felonies or two incarcerations of 30 days or more.

Level V - Five or more unrelated felonies or three or more incarcerations of 30 days or more.

C. Prior Criminal History and Gender

In recent years the differences in the prior criminal history between the races has been declining and this is the result of the increasing number of females who are being convicted and sentenced for felony offenses. Unlike males, white females have more prior criminal history than black females: 59.0% of black females were in level I compared to 51.6% of white females. For the same level of criminal history level both black offenders of either gender had a higher percentage of prison sentences than white offenders.

Prior Criminal History by Race, FY14

White	8.2%	24.4%	42.2%	45.5%	52.2%	27.1%

D. Prior Criminal History and Offense

The more severe sentencing for blacks indicated in the prior criminal history analysis might be because of differences between the races in offense and the felony class.

The analysis below calculates the percent of offenders sentenced to prison, and the average prison sentence of those offenders sentenced to prison for level I offenders sentenced to class A violent, sex and drug offenses, class C nonviolent offenses and all DWI offenses. Because of the smaller sample, the time period was extended to three years (FY12-FY14). The

calculations indicate that the few differences between the races are probably the result of differences in the offenses within the violent class A offense group (murder, robbery, assault).

Prison as a Percent of All Sentences and Average Prison Sentence for Offenders with Level I Prior Criminal History by Offense, FY12-FY14

Total Non-Violent	9,248	3.9%	4.3				

E. Time Served Disparity by Race

The previous analysis examined variations in sentencing by race but the disparity that results in blacks having a much higher incarceration rate than other races could also be the result of the release practices of the Missouri Board of Probation and Parole. For offenders sentenced to a prison sentence, the Board of Probation and Parole has the discretionary responsibility to determine the release date, subject to statutory restrictions on minimum prison time and the statute that defines conditional release.

In FY14 the Board of Probation and Parole released 7,531 offenders to the first release in their commitment. The average time served was 32 months and that comprised 40.5% of the aggregate sentence. Blacks served significantly more time than whites (43 months compared to 28 months) and also served more time as a percent of the sentence (48% compared to 37%).

Percent of Sentence Served and the Guideline or Minimum Prison Term (MPT) Percent of Sentence, Board Hearings FY14

Race and Hispanic	Hearings	Average Sentence (mths)	Time Served (mths)	Actual Percent Served	Guideline / MPT (mths)	Guideline / MPT % Served	Difference between Actual & Guideline Percent Served
Black	2,093	81.8	43.0	52.6%	39.4	48.2%	4.4%
Hispanic	161	65.8	31.2	47.4%	26.6	40.4%	7.0%
White	5,223	65.1	28.1	43.2%	23.8	36.6%	6.6%
Other	54	64.8	27.9	43.1%	24.9	38.4%	4.6%
Total	7,531	69.7	32.3	46.3%	28.2	40.5%	5.9%

The Board bases its release decisions upon a risk assessment known as the salient factor which is completed prior to the parole hearing. The risk factors include prior criminal history, institutional adjustment, substance abuse, education, age and vocational skills. The instrument has been validated by the DOC to be predictive of the risk of recidivism. The risk assessment, together with the felony class and the offense type, are used to calculate a guideline release date.

A measure of racial disparity is the extent to which the Board's adherence to the guideline sentence varies by race. In FY14, average time served as a percent of the sentence for blacks was 52.6%, while the guideline time served percent of sentence was 48.2%. The Board, therefore, required black offenders to serve 4.4% longer than the guideline time served. This, however, was less than the 6.6% additional time served over the guideline stay for whites and the average 5.9% over-guideline stay for all offenders. Based upon this analysis there is no racial bias in the Board's compliance with its guidelines.

The higher time served by blacks is because of the longer, more violent sentences, as explained in the previous section on sentencing, and by the higher risk assessment of blacks. Only 14% of blacks are scored Excellent compared to 23% of whites, and the average risk score of whites is 1.5 compared to 0.5 for blacks.

Salient Factor Risk Assessment First Releases in FY14

Race and Hispanic	Category SF Score Hearings	Lowest Risk -----Highest risk					Total
		Excellent 4 to 9	Above Average 2 to 3	Average -1 to 1	Below Average -2 to -3	Poor -4 to -11

* High score is low risk

F. A statistical modeling of the causes of sentencing disparity

The analysis of disparity so far in this section has been descriptive, comparing average sentences for variations in offense severity, felony class and prior criminal history. A broader analysis is possible by developing a statistical model.

Several statistical analyses were undertaken to understand the relationship between race and sentencing decisions in Missouri. However, the relationship between race and sentencing is not straightforward, as there are many other factors that affect sentencing decisions and also vary across race. For example, prior criminal history and current offense information (type of offense and severity) both affect sentencing and may differ across racial groups. An analysis is presented below based upon sentencing information from FY2008 through FY2014.

In Missouri, black offenders are more likely than their white counterparts to have a prior criminal history. They are underrepresented in the first time offender category and overrepresented in all other groups. This difference is statistically significant (p-value < 0.001) and may be causing these offenders to receive more severe sentences on average.

PCHL * Race Cross Tabulation

			race		
			White / Hispanic	Black	
PCHL	1	Count	57874	21433	79307
		% within race	42.3%	38.8%	41.3%
	2	Count	32883	13686	46569
		% within race	24.0%	24.8%	24.3%
	3	Count	22019	9682	31701
		% within race	16.1%	17.5%	16.5%
	4	Count	12985	5514	18499
		% within race	9.5%	10.0%	9.6%
	5	Count	10973	4863	15836
		% within race	8.0%	8.8%	8.3%
Total	Count	136734	55178	191912	
	% within race	100.0%	100.0%	100.0%	

Additionally, black offenders are far more likely than their white counterparts to be sentenced for A and B felonies (p-value < 0.001). They were sentenced for A felonies at nearly three times the rate of white offenders. Statutes require harsher sentences for these types of offenses, and this factor also influences the sentencing differences between racial groups.

Felony Class * Race Cross Tabulation

			race		
			White / Hispanic	Black	
class	A	Count	3300	3917	7217
		% within race	2.4%	7.1%	3.8%
	B	Count	16635	9271	25906
		% within race	12.2%	16.8%	13.5%
	C	Count	87976	31308	119284
		% within race	64.3%	56.7%	62.2%
	D	Count	28823	10682	39505
		% within race	21.1%	19.4%	20.6%
Total	Count	136734	55178	191912	
	% within race	100.0%	100.0%	100.0%	

Finally, black offenders are more likely than their white counterparts to be sentenced for violent or sex crimes (p-value <0.001). As with previous factors, the type of offense influences sentencing, and these differences may the severity of sentences handed down to individual offenders.

Offense * Race Cross Tabulation

			race		Total
			White / Hispanic	Black / Other	
offense	1	Count	19221	11118	30339
		% within race	14.1%	20.1%	15.8%
	2	Count	72540	26911	99451
		% within race	53.1%	48.8%	51.8%
	3	Count	44973	17149	62122
		% within race	32.9%	31.1%	32.4%
	Total	Count	136734	55178	191912
		% within race	100.0%	100.0%	100.0%

In order to understand the interrelationship between the different factors, a logistic regression was used to estimate the probability of an offender receiving a prison sentence. For these purposes, shock incarceration/120 day programs are not included in the prison population.

This model includes additional variables one at a time into the model and assesses the changes in the quality of the model fit for each subsequent variable. One important measure of the value of a variable in a model is the R Squared value. This measures the amount that the model is improved by including the additional variable. When the R Squared increases substantially, a variable is important in predicting the outcome. While the variable “race” is included in this model, it is the last variable added (least significant) and does not change the R Squared value in a meaningful way.

Model Summary			
Step	-2 Log likelihood	Cox & Snell R Square	Nagelkerke R Square
Prior Criminal History	189018.392 ^a	.140	.206
Offense Type	176854.948 ^a	.192	.283
Offense Class	170990.487 ^a	.217	.319
Age	170006.091 ^a	.221	.325
Rural/Urban/Metro	169012.534 ^a	.225	.331
Gender	168258.014 ^a	.228	.336
Race	168233.771 ^a	.228	.336

a. Estimation terminated at iteration number 5 because parameter estimates changed by less than .001.

To understand the effect of race, the probability of receiving a prison sentence was determined for an “average” offender. In this case, an “average” offender has some documented criminal history and committed a B or C felony. The table below indicates that if the offender is a white male, the probability of going to prison is 0.49 (49%) while an identical black male has a probability of 0.50 (50%) of going to prison. A similar effect is seen for females. Notice that the difference in prison probabilities for the two genders is much larger than that for the two races. This pattern is similar for prior offenses, offense type and rural/urban areas.

Estimates					
Sex	Race	Mean	Std. Error	95% Wald Confidence Interval	
				Lower	Upper
Male	White	.49	.003	.48	.49
	Black	.50	.003	.50	.51
Female	White	.37	.005	.36	.38
	Black	.39	.005	.38	.40

Covariates appearing in the model are fixed at the following values: age=32.81

There is an effect found for the variable rural, which is a measure of how rural or urban an area is. As this variable is also significant (and of much greater magnitude than race), the sentencing circuit court was included in the model instead of the more general variable. This was done to understand how sentencing varies across courts. The results are interesting in that when the sentencing court is included in the analysis, race is no longer included in the

model. Also, the circuit court is more important than either age or gender when determining if prison sentences are given. It appears that differences in sentencing between circuit courts are responsible for the appearance of a small racial effect found in the earlier analysis.

Model Summary

Step	-2 Log likelihood	Cox & Snell R Square	Nagelkerke R Square
Prior Criminal History	189018.392 ^a	.140	.206
Offense Type	176854.948 ^a	.192	.283
Offense Class	170990.487 ^a	.217	.319
Circuit Court	165949.240 ^a	.237	.349
Age	164984.819 ^a	.241	.355
Gender	164213.359 ^b	.244	.359

a. Estimation terminated at iteration number 5 because parameter estimates changed by less than .001.

b. Estimation terminated at iteration number 6 because parameter estimates changed by less than .001.

Based upon these analyses, it appears that while black offenders do tend, on average, to serve harsher sentences than white offenders, these effects appear to be due to external factors. This general pattern is also seen when 120 day/shock Incarcerations are included as a third possible sentencing option. The effect of previous criminal history, type and severity of crime, and gender are well studied and understood. However, the great discrepancies across circuit courts are not currently well understood; it appears that the court which sentences an offender has a large effect on the likelihood that the offender has to serve time in prison.

G. Sentencing Disparity When Adjusted for the Variables in the Sentencing Model

Probability of Sentencing an "Average" Offender to Prison Calculated from the Model of Sentencing

The above chart is a re-working of the first disparity chart on prison sentences as a percent of all sentences (page 11). The chart attempts to adjust for variations in offense, prior criminal history, gender and age. The adjusted chart still shows considerable variation between circuits, from a low 28% to a high of 73% which indicates that there is much variation by

circuit court that cannot be explained by the analysis. In general, the ranking of circuits does not change after adjustment but the two counties with the most serious crime (St. Louis City and Jackson County) both decrease after adjustment because serious crime has been averaged out of the equation.

Conclusions on Racial Disparity in Sentencing

The analysis of sentencing practice does not find that race is significant at explaining the differences in sentencing between the races. The analysis shows that most of the variation in sentencing between the races is explained by variables that are intended to determine sentencing (offense, felony class and prior criminal history). Two other variables that are known to be related to recidivism are also significant (age and gender). The variations in sentencing between circuit courts may include some racial bias but the impact in the model is small and cannot explain the large differences in incarceration rates between the races. A broader study including socio-economic variables and patterns of policing, arrest and charging will be necessary.

6. DISPARITY IN THE APPLICATION OF THE DEATH PENALTY

The study analyzes recent trends in prison admissions for murder, including sentences that require the death penalty, and provides measures that identify racial and geographic disparity in the application of capital punishment.

Sentencing for Murder (Chapter 565, RSMo)

The death sentence for murder was re-imposed in Missouri in 1977 as capital murder and the authorized sentences were the death penalty or life with no parole for 50 years. In October 1984, capital murder was replaced by murder 1st degree and the authorized sentences were the death penalty or life without parole. Prior to October 1984, murder 1st degree had an authorized sentence of life with parole eligibility. The death penalty analysis for murder 1st degree includes sentences of capital murder but excludes sentences of murder 1st degree for offenses committed prior to October 1984. The sentencing data used in this review uses the first sentencing decision. Following appeals against the death penalty the original decision may be later reversed.

Sentences for Murder

From FY95 to FY07, admissions for murder were generally declining but since then admissions have been increasing. In FY14, admissions were higher than those in the late 1980s.

Murder 1st degree admissions as a percent of all murder admissions were declining from FY95 until FY09, since then the percentage has increased a little.

The application of the death penalty.

In January 2006, a decision by a U.S. District Court on the constitutionality of Missouri's method of execution placed a moratorium on executions. The 8th Circuit Court of Appeals vacated that decision in June 2008 but until 2014 few executions had been held. In FY14, eight executions were held and the number currently awaiting execution is 41. The number sentenced to death has declined from a maximum of 29% in FY1989 to about 5% of murder 1st degree admissions. Only three capital punishment offenders have been admitted in the last

Murder 1st Degree Admissions and Percent with Death Penalty

Awaiting Capital Punishment and Executions

Is there racial disparity in the application of the death penalty?

Commitment rates for murder indicate that blacks are thirteen times more likely to be convicted of murder than other races.

Average Annual Murder Sentencing Rates per 100,000 Population

	FY85-FY97	FY98-FY12	FY14
Black	17.1	12.6	14.9
Other Races	1.6	1.3	1.1
Total	3.5	2.6	2.7

Sentencing rate is:

Annual sentences for murder/Missouri population *100,000

Missouri Population: U.S. Bureau of Census 1990, 2000, 2013

The indicators used to measure racial disparity in the application of the death penalty are:

- The percent of offenders convicted of Murder 1st degree that receive the death penalty
- The percent of offenders who are convicted of Murder who are sentenced to Murder 1st degree.

The two measures indicate that Other Races (all other race/ethnic groups combined) are more likely to be convicted of Murder 1st and to receive the death penalty than blacks. From FY87 to FY97, 10.9% of blacks convicted of Murder 1st degree received the death sentence compared to 19.9% of Other Races. In the period FY98-FY14, 3.3% of blacks convicted of Murder 1st degree received the death sentence compared to 8.3% of Other Races. Other Races are also more likely to be convicted of Murder 1st degree than blacks.

**Murder 1st as Percent of Murder Sentences and
Death Penalty Sentences as a Percent of Murder 1st Degree Sentences By Race**

	Blacks					Other Races				
	All Murder	Murder 1st	Death Penalty	Murder 1 as Pct. Of Murder	DP as Pct. Of Murder 1st	All Murder	Murder 1st	Death Penalty	Murder 1 as Pct. Of Murder	DP as Pct. Of Murder 1st

FY 2014	106	19	-	17.9%	0.0%	56	17	2	30.4%	11.8%

Is there a geographical disparity in the application of the death penalty?

In the period from the re-introduction of capital punishment to 1997, the first class and rural counties had the highest rates of capital punishment; but since 1997, when the rate at which capital punishment was applied began to decline, St. Louis County is the county with the highest rate of capital punishment (16.7%). St. Louis City and Jackson County have the lowest rate of capital punishment (0.9% and 0% respectively). Below are the counties with the highest number of murders.

Death Penalty Sentencing By Court Circuit FY87-FY97

	All Murder	Murder 1st	Death Penalty	Murder 1 as Pct. Of Murder	DP as Pct. Of Murder 1st
St. Louis City	469	106	10	22.6%	9.4%
St. Louis County	258	80	12	31.0%	15.0%
Jackson County	612	197	18	32.2%	9.1%

Total	2,553	675	38	26.4%	5.6%

Is there a racial disparity by sentencing county in death penalty cases?

During the period FY98-FY14, only the First Class counties sentenced a higher proportion of blacks to the death sentence than Other Races but the difference may not be statistically significant because of the small numbers of Murder 1st degree cases. St. Louis City, St. Louis County and the rural counties had a higher percent of Other Races sentenced to capital punishment than blacks.

Death Penalty Sentencing By Court Circuit and Race FY98-FY14

7. RECIDIVISM AND SENTENCING DISPOSITION

The Sentencing Commission is aware that a prison sentence is not always the sentence that has the best chance of success in reducing future recidivism. Prison can reinforce criminal behavior and permanently damage family, social and employment connections. Identifying alternative non-prison sentences that enable community rehabilitation to occur is an important responsibility for the Commission. The following Commission study of recidivism examines the relationship between recidivism and the type of sentence and the effect of prior criminal history on rehabilitation.

The study uses data from the Department of Corrections of offenders received for a new felony offense between July 1997 and June 2012. Two measures of recidivism are calculated:

- The first incarceration following the start of a new probation or a release from prison. The incarceration may be for a technical violation while on probation or parole or for a new sentence.
- The first new conviction following the start of a new probation or a release from prison. The new conviction may be a prison or probation sentence supervised by the Department of Corrections.

The time period for the study at 15 years is long but there needs to be a sufficient number of offenders who have been incarcerated and released at least five years in order to calculate five year recidivism rates for all offenders, irrespective of sentencing disposition.

Recidivism Rates for Probation Compared to Prison

The first analysis compares recidivism of offenders sentenced to probation with recidivism by offenders sentenced and released from prison.

Average Recidivism Rates for Offenders with New Sentences FY99-FY14

Actual Sentence	Sentences	Released 5 years +	Percent in Prison within				
			6 mths	12 mths	2 yrs	3 yrs	5 yrs
PROBATION	266,652	179,308	4.9%	12.1%	23.0%	29.4%	36.2%
SHK/TRT	46,601	30,822	6.8%	18.6%	35.6%	44.7%	53.6%
PRISON	79,588	46,297	12.9%	25.8%	41.3%	48.5%	55.7%
Total	392,841	256,427	6.7%	15.6%	28.0%	34.9%	41.8%

The data shows that offenders sentenced to probation have lower recidivism rates than prison based sentences. After five years, probationers are two-thirds less likely to be later incarcerated than offenders released from prison, and two-thirds less likely to be convicted of a new offense.

The Impact of Prior Criminal History on Recidivism

The recidivism analysis indicates that both the incarceration rate and the new conviction rate increase with increasing prior criminal history. The incarceration rate for Level 5 offenders, however, has almost leveled off at 62%. Incarceration rates are generally higher than new conviction rates because of revocations of probation and parole for technical violations of supervision, including arrests for new offenses but without new charges being filed.

**Recidivism Rates after 5 years and Prior Criminal History
FY99-FY14**

The Impact of Prior Criminal History on Probation or Prison Outcomes

If recidivism increases with prior criminal history, but probation sentences generally result in lower recidivism it is useful to calculate at what level of prior criminal history does probation cease to be the low recidivism sentence.

Recidivism Rates After Two Years by Type of Sentence and Prior Criminal History FY99-FY14

Sentence	Prior Criminal History Level				
	I	2	3	4	5
	No Prior Felonies, no more than 3 misd.	1/2 felonies, no incarceration	1 incarceration or 3 felonies	2 incarcerations or 4 felonies	3+ incarcerations or 5+ felonies
Probation	19.2%	26.4%	35.2%	40.2%	40.3%
Shk/Trt	29.6%	35.4%	39.3%	43.1%	46.3%
Prison	34.6%	40.9%	44.1%	45.8%	43.0%
Average	21.3%	31.3%	39.4%	43.2%	42.9%
<i>Recidivism Gap</i> Prison Rate less Probation Rate	15.3%	14.5%	8.9%	5.6%	2.7%

From the analysis of FY99-FY14 new sentencing there is a 15.3% reduction in recidivism after two years for Level 1. For Level 2 offenders sentenced to probation compared to those sentenced to prison there is a reduction in recidivism of 14.5%. For Level 5 offenders, the gap between probation and prison recidivism is less than 3%. It is important to note that these rates were calculated from actual sentencing and not from a statistically matched comparison sample. There may be factors that influenced the sentencing decision to grant probation to an offender with considerable prior criminal history and it is these factors that predicted the lower recidivism outcomes.

Notes:

* Recidivism calculation: CHRG indicates that the recidivism rates are based upon the number of offenders sentenced for the charge code. GROUP indicates that the incarceration rates were based upon the numbers sentenced for the offense group and felony class group (A/B or C/D) of the offense. The offense group aggregation is used when the number of offenses in a prior criminal history level is less than 200.

Care should be exercised in interpreting the statistics, particularly when the numbers in the study are low. Although the study has used a 14 year time frame the numbers of offenders sentenced to prison for serious violent and sex offenses and released at least two years may be very small. For non-violent offenses the study size is sufficient for rates to be calculated for specific offenses.

APPENDIX 1

Felony Sentences, Percent Disposition and Average Sentence From Fiscal 2009 to Fiscal 2014

The sentencing data is extracted from the DOC OPII database and includes the first sentence for unrelated sentences in Missouri courts. Related sentences are sentences handed down at the same court and on the same day for the same offender. Where there is more than one related sentence, the most serious sentence is selected. Revocations of sentences are not included. Prison sentences include only sentences for a term sentence (commitment). SES probation and 120 day probation sentences are not included in the prison sentence length averages.

Felony Sentences Received by the Department of Corrections (FY 2009- FY2014)

Charge Code	Offense	RSMo.	Felony Class	Offense Group	Sentence Count	Percent			Sentence (years)

APPENDIX 2

Authorizing Statute: Section 558.019, RSMo

6. (1) A sentencing advisory commission is hereby created to consist of eleven members. One member shall be appointed by the speaker of the house. One member shall be appointed by the president pro tem of the senate. One member shall be the director of the department of corrections. Six members shall be appointed by and serve at the pleasure of the governor from among the following: the public defender commission; private citizens; a private member of the Missouri Bar; the board of probation and parole; and a prosecutor. Two members shall be appointed by the supreme court, one from a metropolitan area and one from a rural area. All members shall be appointed to a four-year term. All members of the sentencing commission appointed prior to August 28, 1994, shall continue to serve on the sentencing advisory commission at the pleasure of the governor.

(2) The commission shall study sentencing practices in the circuit courts throughout the state for the purpose of determining whether and to what extent disparities exist among the various circuit courts with respect to the length of sentences imposed and the use of probation for offenders convicted of the same or similar crimes and with similar criminal histories. The commission shall also study and examine whether and to what extent sentencing disparity among economic and social classes exists in relation to the sentence of death and if so, the reasons therefor sentences are comparable to other states, if the length of the sentence is appropriate, and the rate of rehabilitation based on sentence. It shall compile statistics, examine cases, draw conclusions, and perform other duties relevant to the research and investigation of disparities in death penalty sentencing among economic and social classes.

(3) The commission shall study alternative sentences, prison work programs, work release, home-based incarceration, probation and parole options, and any other programs and report the feasibility of these options in Missouri.

(4) The governor shall select a chairperson who shall call meetings of the commission as required or permitted pursuant to the purpose of the sentencing commission.

(5) The members of the commission shall not receive compensation for their duties on the commission, but shall be reimbursed for actual and necessary expenses incurred in the performance of these duties and for which they are not reimbursed by reason of their other paid positions.

(6) The circuit and associate circuit courts of this state, the office of the state courts administrator, the department of public safety, and the department of corrections shall cooperate with the commission by providing information or access to information needed by the commission. The office of the state courts administrator will provide needed staffing resources.

7. Courts shall retain discretion to lower or exceed the sentence recommended by the commission as otherwise allowable by law, and to order restorative justice methods, when applicable.

8. If the imposition or execution of a sentence is suspended, the court may order any or all of the following restorative justice methods, or any other method that the court finds just or appropriate:

- (1) Restitution to any victim or a statutorily created fund for costs incurred as a result of the offender's actions;
- (2) Offender treatment programs;
- (3) Mandatory community service;
- (4) Work release programs in local facilities; and
- (5) Community-based residential and nonresidential programs.

9. The provisions of this section shall apply only to offenses occurring on or after August 28, 2003.

10. Pursuant to subdivision (1) of subsection 8 of this section, the court may order the assessment and payment of a designated amount of restitution to a county law enforcement restitution fund established by the county commission pursuant to section 50.565. Such contribution shall not exceed three hundred dollars for any charged offense. Any restitution moneys deposited into the county law enforcement restitution fund pursuant to this section shall only be expended pursuant to the provisions of section 50.565.

11. A judge may order payment to a restitution fund only if such fund had been created by ordinance or resolution of a county of the state of Missouri prior to sentencing. A judge shall not have any direct supervisory authority or administrative control over any fund to which the judge is ordering a defendant to make payment.

12. A defendant who fails to make a payment to a county law enforcement restitution fund may not have his or her probation revoked solely for failing to make such payment unless the judge, after evidentiary hearing, makes a finding supported by a preponderance of the evidence that the defendant either willfully refused to make the payment or that the defendant willfully, intentionally, and purposefully failed to make sufficient bona fide efforts to acquire the resources to pay.

13. Nothing in this section shall be construed to allow the sentencing advisory commission to issue recommended sentences in specific cases pending in the courts of this state.

(L. 1986 H.B. 1098 § 1, A.L. 1988 H.B. 1340 & 1348, A.L. 1989 S.B. 215 & 58, A.L. 1990 H.B. 974, A.L. 1993 H.B. 562, A.L. 1994 S.B. 763, A.L. 1998 H.B. 1508 merged with S.B. 766, A.L. 2003 S.B. 5, A.L. 2004 H.B. 1055, A.L. 2005 H.B. 353, A.L. 2012 S.B. 628)

(2000) Legislative intent of section was to increase or enhance punishment for present as opposed to prior conviction and thus is not an ex post facto law. Bailey v. Board of Probation and Parole, 36 S.W.3d 13 (Mo.App.W.D.).
